

MODULE PRACTICE

The Hacking Process Escalation of Privilege

With a successful escalation of privilege, the attackers can gain access to the systems/networks of the organization.

Bug Hunting

Bug hunting is the process of searching, identifying, and eliminating bugs within an application or service.

The Hacking Process content

The hacking process consists of Footprinting, Scanning, Enumeration, System Hacking, Escalation of Privilege, Planting Backdoors, and Covering Tracks.

The Hacking Process Scanning

Scanning is an initial active/passive inspecting technique to gather technical information on target systems.

The Hacking Process System Hacking

System hacking is the planning and execution of attacks conducted based on the information gathered in the previous steps.

The Hacking Process Covering Tracks

Covering tracks is the act of removing or destroying signs of intrusion and activities performed on a system.

The Hacking Process

The hacking process is ethical hacking tactics for organizational defense.

The Hacking Process Enumeration

Enumeration is the consolidation and gathering of more detailed information on target systems and networks.
